

Dosage Guide for Equine Easy Care

DOSING:

The horse drops contain 1500mg/50mL dropper bottle and has 30mg per 1mL

We suggest starting with 22.5mg = 0.75mL of the dropper to kick start the endocannabinoid system on day one only

Administer 15mg the following days = 0.50mL

If required, slowly increase by adding 1/4 more of the dropper, every fourth day, until results are seen
